Sarah E Draves

New York, NY | sarah.e.draves@gmail.com | linkedin.com/in/sarahedraves | sarahedraves.github.io

Summary

Forward deployed engineer with 4+ years of startup analytics experience and a background in computational physics research. Experienced at working directly with enterprise customers to scope new AI use cases, resolve integration issues, and track product adoption. Skilled at turning ambiguous customer problems into working technical solutions and explaining them clearly to everyone from executives to end users.

Experience

Credal.ai, *Forward Deployed Software Engineer* May 2026 – July 2026

- Managed commercial accounts worth millions in ARR, including customers up for renewal, through regular meetings with customer teams and partnering on implementing new use cases.
- Built internal and customer-facing usage dashboards and SQL data sources to provide insights on adoption over time and by product feature, including frequently used agents, MCP servers, and integrations.
- Diagnosed and fixed integration failures between Credal's platform and other SaaS platforms and MCP servers by tracing issues through application code, auth tokens, and configuration in staging and production.
- Designed agents for internal usage at Credal to automate internal processes, enabling more consistent engagement with customers and ensuring that all projects were tracked and updated regularly.
- Collaborated on GTM strategy, formalized tracking of prospects and customers including reconfiguring Salesforce, sourced sales leads, and demoed the product to potential customers.

Brown Dwarfs in NYC Group, *Researcher* May 2025 – April 2026

- Compiled and standardized TESS and K2 light curves for ~200 stars into a multi-year dataset, and built a reusable Python pipeline that generates diagnostic multiplots for each object while handling missing observations and mixed data sources.
- Reviewed ~1,000 light curves to catalog morphological features and produce summary statistics; contributed code, figures, and methodology to an in-progress paper with a postdoctoral researcher.
- Funded by an AstroCom NYC undergraduate research fellowship backed by the NSF and the Simons Foundation.

Gotham Web Lab, *Research Associate* May 2024 – April 2026

- Built a Python package that organizes multi-million-row LSST simulated galaxy catalogs into hierarchical objects (catalog → light cone → redshift slice) for filament reconstruction in DisPerSE.
- Improved galaxy position estimates under photometric redshift uncertainty using PDF resampling and a KD-tree-accelerated mean-shift algorithm; calibrated DisPerSE and ran 3D reconstructions to measure accuracy.

Highspot (now part of Seismic), *Data Analyst (Revenue Operations Analytics)* June 2019 – June 2023

- Led stakeholder discovery with sales, marketing, finance, and executive teams to translate ambiguous business questions into maintainable analytics systems used for operational and strategic decision-making.
- Designed and deployed production data infrastructure integrating Salesforce, Workday, and operational systems into Snowflake SQL data models and Tableau dashboards used by 50+ stakeholders to monitor pipeline health, quota attainment, and marketing performance.
- Established data validation workflows comparing Tableau dashboards against source systems, improving trust in executive-facing metrics and reducing downstream clarification and rework.
- Presented analyses and dashboard insights in biweekly executive go-to-market review meetings, supporting performance discussions across sales, marketing, and leadership teams.
- Managed Tableau dashboard permissions and group access controls to ensure appropriate data visibility while supporting expanding stakeholder usage across teams.
- Promoted from intern to full-time analyst in April 2020 based on performance and project ownership.

Education

CUNY New York City College of Technology, Bachelor of Science December 2025

- Major: Applied Computational Physics, Overall GPA: 4.00/4.00, graduated *summa cum laude*
- Additional coursework at CUNY Graduate Center and CUNY Borough of Manhattan Community College

Colgate University, Bachelor of Arts December 2019

- Major: Mathematical Economics, Major GPA: 3.90/4.00, graduated *magna cum laude*

Technical Skills

Languages: Python (Pandas, NumPy, SciPy, scikit-learn, Matplotlib), SQL, TypeScript, Java
AI & Integrations: MCP servers, AI agents, REST APIs, SaaS integrations
Data & Tools: Snowflake, Tableau, Salesforce (admin), Git
